The D.I.T. Super 11A2 Diamond and or CBN Cup Wheel Series

Harry G. Sachsel, C.A.E.
Certified in Abrasive Engineering

The 11A2 cup wheel series is used on many tool and cutter grinding applications such as Deckel, Kuhlman, and Gorton tool grinders. This type grinding wheel has a wide face width 1/4", 3/8", and 1/2" in order to grind longer ground edges such as steel or carbide reamers. Standard Superabrasive depth is 1/8" but 1/4" is also available.

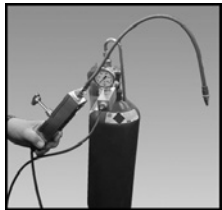

Solid aluminum core material is standard and is more rigid. Diameters are 3", 3-1/2", 4" and 5". 11A2 wheels are made primarily for dry grinding but are also made for wet applications.

Again, we made this wheel for you to increase your productivity and profits. Try one!
